OPTIO FAX™ Reliable Fax Communications Made Easy

THE SOLUTION

What does Optio do?

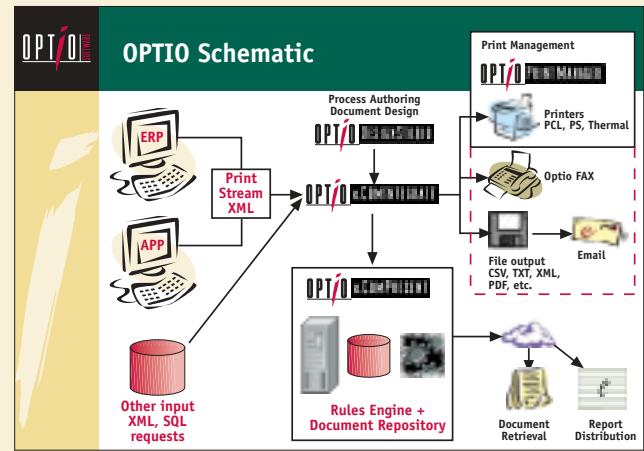

We provide infrastructure software and services that enhance the form, content, distribution and availability of business critical information.

Why is that important?

We reduce the cost and complexity of document-centric business processes while extending the value of existing technology investments.

Analysis of costs made by a customer

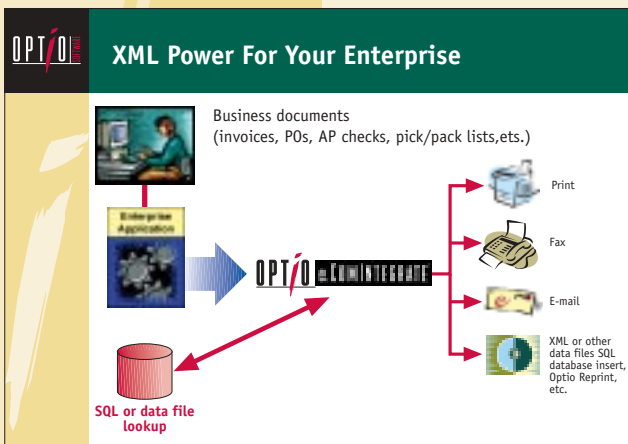

Development cost per page	€ 0.329
System development cost per page	€ 0.035
Cost for production and distribution	€ 0.196
Cost for maintenance	€ 0.035
Cost for support	€ 0.035
Total cost per page	€ 0.63

OPTIO e.COMINTEGRATE™

XML, Power for Your Enterprise

Optio e.ComIntegrate™ is Optio's next generation server that provides the software infrastructure to enable Business-to-Business (B2B) integration, communication and presentation of critical information. It builds on the strength of Optio's core technologies and adds inbound and outbound processing of XML. This enables businesses to integrate operations and participate in e-marketplaces and trading exchanges utilizing XML dialects such as CBL, cXML, BizTalk™ or ebXML. Today, businesses face two critical challenges when implementing XML: 1) How to adapt to the many emerging XML dialects while maintaining one internal standard?; and 2) How to use XML to drive business communications via traditional devices like print, fax and e-mail? **Optio e.ComIntegrate™** answers these challenges by:

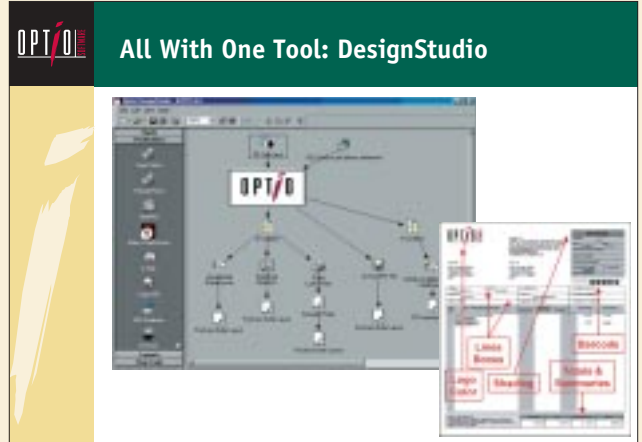

- Tapping into the information created by e-business, legacy and custom applications.
- Accepting any variety of XML including CBL, cXML, BizTalk or ebXML.
- Transforming application information and XML into a variety of rule-driven formats and standards.
- Exchanging XML documents with a variety of XML-enabled trading exchanges, e-marketplace or trading partners.
- Delivering highly tailored business documents via the web, e-mail, fax or print.

OPTIO DESIGNSTUDIO™

Visual Document Design and Routing

Optio DesignStudio™ is a Windows-based application providing visual- and object-oriented document design and routing capabilities. It allows you to design and customize the appearance of documents as well as visually map the document routing process right from your desktop.

Optio DesignStudio™ accelerates the document design process, providing you with the shortest distance between your document design concept and the customized output you need in a thriving enterprise. No programming, no hitandmiss graphics placement. You simply point-and-click to get the results you want, when you want them, where you want them in your document quickly and efficiently. With **Optio DesignStudio™**, documents can be designed much more rapidly than with traditional methods. This enables you to meet second phase rapid implementation timelines, shorten new application implementations of your Customer Relationship Management (CRM) and Supply Chain applications and derive greater value from your enterprise applications in a shorter period of time.

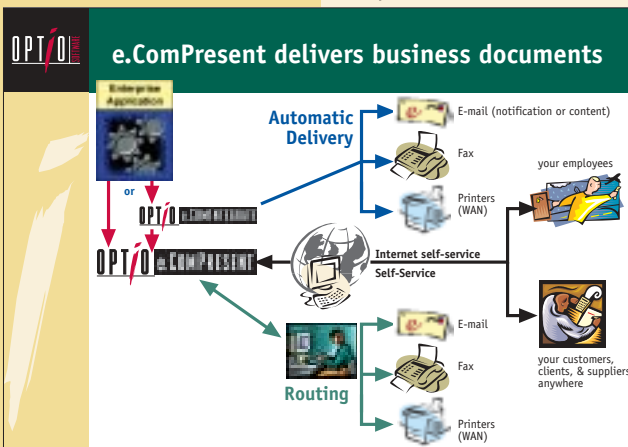

OPTIO e.COMPRESENT™

B2B Presentation Portal

Optio e.ComPresent™ is a B2B presentation portal that provides powerful and comprehensive Web-based report and document distribution, allowing users to access, view and print information from any browser-enabled computer. The solution provides easy indexing, secure distribution and self-service access over the Web to:

- Enterprise reports.
- Business-critical documents such as invoices, purchase orders and account statements.
- Content from desktop productivity applications including documents, spreadsheets and graphics – regardless of the file type.

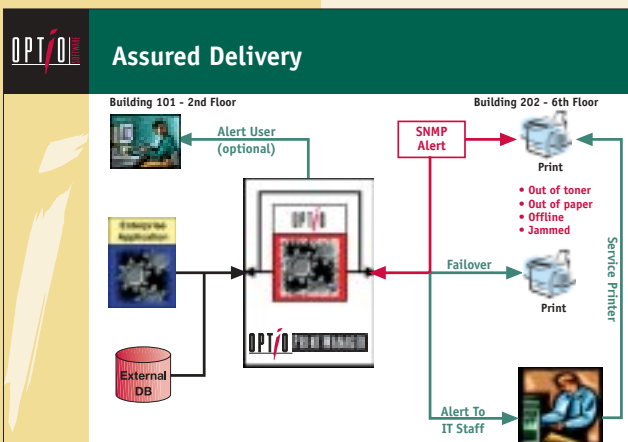

With **Optio e.ComPresent™**, you can now target mission-critical information to anyone in your trading exchange (customers, partners, suppliers and employees) and securely deliver it via standard web browsers. In addition, **Optio e.ComPresent™** provides notification and delivery services to authorized users ensuring up-to-the-minute availability of the information that keeps your business running.

OPTIO PRINT MANAGER™

Realize Productivity Gains by Managing the Delivery of Enterprise Documents

- Central control and monitoring of the status of printer devices and jobs.
- Assured delivery of documents to the correct destination in the correct format.
- Automated notification of high priority events reduces downtime and improves efficiency and throughput.
- Load balancing.
- Print environment availability increases resulting in reduced errors and timely distribution of business critical information.

IMAGING SOLUTIONS™

Automated Intelligent Data Capture and Document Processing for the Enterprise

Optio Imaging Solutions™ is our automated intelligent data capture and document processing applications that simplify and streamline the way you manage, access, extract and deliver information from inbound and outbound documents. **Optio Imaging Solutions™** can enable your company to reduce costs and key stroke error that results from manual document handling processes.

- Automating the processing of inbound transactional documents.
- Automatically scans, images and archives inbound and outbound documents.
- Extracts data from documents to feed enterprise systems.
- "Learns" unfamiliar documents - not just those it's pre-configured to recognize - identifying and extracting more information with each round of processing.
- Provides repeatable, auditable processes to help companies comply with Sarbanes-Oxley and other regulations.

FAX™

Reliable Fax Communications Made Easy

OptioFAX™ is a comprehensive, powerful fax transmission and reception solution designed to automate enterprisewide, high-production faxing to support your specific business requirements. With **OptioFAX™**, users can automatically send, receive, print, view and route documents and information to **OptioFAX™** – installed computers and other fax devices right from their desktop. This increases productivity and reduces costs by eliminating manual methods for delivering enterprise information.
